
Data Governance – One Day Course Agenda

Overview

Data governance is a crucial part of data management and includes people, processes, standards, and technology essential to managing data and reach your maximum benefit from your data. Data governance also works to ensure compliance and manage risk and is tailored to the culture, information maturity and priorities of an organisation.

This course will provide participants with an overview of the disciplines of governing data, covering the essential components of an organisation-wide program, and outline the steps involved to execute a successful data governance program. The course makes data governance real and tangible through concepts, principles and practices relatable to participants, something crucial as changes in data governance need to adapt to data developments such as agile development, big data, and self-service analytics.

Learning Outcomes

At the end of this course delegates should be able to:

- Define what data governance is and why it is increasingly a 'must have' for organisations
 - Understand:
 - What data governance is and isn't
 - Assess how data mature your organisation is
 - How to build an internal case for data governance
 - How and where to start introducing data governance
 - Key principles of data governance
 - Key lessons for effective culture change
 - What the main components of a successful data governance initiative are
 - How to create a data governance strategy and roadmap
 - The six key components of a data governance framework
 - Identify
 - Expected benefits and how to measure them
 - Your role in data governance
-

Data Governance DLG-200
